
Contents

Preface.....	xvii
Acknowledgments	xix
Author.....	xxi

1. Fuzzy Front End	1
Introduction	1
Innovation Process and Front End Funnel.....	2
Innovation vs. Invention	3
Innovation Classifications.....	4
A Systematic Approach to the Fuzzy Front End	7
Closing Remarks	8
Summary	8
Exercise.....	9

Part I Soft Skills of Engineering

2. Teams and Team Dynamics.....	13
Introduction.....	13
Emotional Intelligence	13
Personality Types and Traits	16
The Four Temperaments	16
Modern Psychology	17
Personality Type Tests	18
Myers-Briggs Type Indicator	19
Insights Discovery Profile	20
Strengths Finder	22
Team Formation for Product Development	23
Elements of a Successful Team.....	23
Developing Trust.....	24
Conflict Resolution.....	24
Making Commitments	25
Having Accountability	25
Getting Results	25
Feedback: Praise and Criticism.....	25
Common Rules of Feedback	27
Receiving Constructive Feedback.....	27
Giving Constructive Feedback.....	28
Summary.....	28
Exercises	29
 3. Program and Project Management	 31
Introduction.....	31
Program Management and Its Tools	31

Strengths, Weaknesses, Opportunities, Threats Analysis	32
Opportunities	32
Strengths	32
Weaknesses	33
Threats	33
Stakeholder Analysis Matrix	33
Elements of Stakeholder Analysis Matrix	34
Risk Analysis, Profile, and Management	35
Risk Response Planning	36
Risk Tracking	37
Cause and Effect Analysis	38
Project Management	39
Project Life Cycle	40
Project Initiation	40
Project Roles	41
Project Approach	41
Project Planning	44
Scheduling	45
Project Execution	45
Monitoring and Control	46
Project Completion	47
Summary	47
Exercises	48
4. Communication Skills	49
Introduction	49
Features of Technical Communications	49
Language	49
Purpose	50
Structure	50
Four-Blockers	51
The A3 Method	52
More on Communicating	54
Working with the Team	55
Draft Document	55
Feedback and Revision	56
Finalization and Approval	56
Closing Remarks	56
Summary	56
Exercise	57
5. Technical Reviews and Checklists	59
Introduction	59
Guidelines	59
Design Evaluation Checklists	60
Elements of a Checklist	60
Summary	64

Part II Front End-Product Development Life Cycle Management and Roadmap

6. Product Life Cycle Management Models	67
Introduction	67
Product Development Models	67
The V-Model for Life Cycle Management	69
Engineering Activities	71
Quality by Design	72
Define, Measure, Analyze, Design, and Verify	73
Define, Measure, Analyze, Improve, and Control	74
The Engineering Roadmap	77
Summary	77

Part III Requirements and Their Cascade

7. Systems and Requirements	81
Introduction	81
Voice of Customer and Voice of Stakeholders	83
Design Documents	84
Subsystem Design Document	86
Subsystem Architecture Document	87
Assembly Design Document	87
Summary	88
Exercises	88
8. Developing a Product's Requirements	89
Introduction	89
Defining the Product to Be Developed	89
Measuring What Customers Need	91
Brainstorming Guidelines	95
Affinity Diagram	96
Ranking High-Level Needs	97
Analytical Hierarchy Process	98
Product Requirements Development	101
Translation from Needs to Requirements	103
Product Requirements Document	105
Summary	106
Exercise	106
9. Concept Development and Selection	107
Introduction	107
Quality Function Deployment	107
Using Quality Function Deployment in Product Development	109
Developing the System Architecture and Function Diagram	111
Boundary and Function Diagram	115

Assign Functions to Subsystems	117
High-Level Design and Concept Selection	119
Pugh Matrix (A Rational Decision-Making Model).....	121
Theory of Inventive Problem Solving (Also Known as TRIZ)	122
An Understanding of Function within TRIZ.....	124
Morphological Analysis	125
Selected Concept.....	126
Summary.....	127
Exercise.....	128

Part IV The Nuts and Bolts of the Design

10. Initial Design Failure Mode and Effects Analysis and Product Risk	131
Assessment	131
Introduction.....	131
Initial Concept Failure Modes and Effects Analysis	131
Preparing for the Detailed Design	134
Product Risk Assessment	138
Hazards, Hazardous Situations, and Harm.....	138
Summary.....	144
Exercise.....	144
11. Transfer Functions	145
Introduction.....	145
A Closer Look at Transfer Functions	146
Design of Experiments	151
Summary.....	156
Exercise.....	156
12. The Three-Dimensional Virtual Product	157
Introduction.....	157
Requirements Decomposition.....	163
Interface Issues and Functional Tolerance Concerns.....	166
Functional Tolerance Analysis	169
Monte Carlo Technique	170
Signal Response Variations.....	171
Stack-up Tolerance Analysis.....	173
Theory of Operation, Manufacturing Approaches, and Selection.....	173
Theory of Operation	175
Choosing Manufacturing Approaches	175
Mechanical Components.....	175
Electronics Printed Circuit Board and Printed Circuit Board Assembly	
Production.....	176
Electromechanical Component Production	177
Make versus Buy Decisions.....	178
Standard Parts, Reuse, and Naming Conventions.....	179
File Storage and Change Control.....	180

Numerical Simulation	181
What-If Scenarios	182
Failure Analysis.....	183
Reversible Failures	184
Irreversible Failures	184
Sudden Failures	184
Progressive Failures	185
Single-Point Solutions vs. Distributions	185
Prototyping and Human Factors.....	189
Assembly or Subsystem Verification Testing.....	189
Summary.....	190
Exercise.....	191
13. Two-Dimensional Engineering Drawings	193
Introduction.....	193
The What and How of Detailed Design	195
Format of a Detailed Engineering Drawing	195
Information Block	196
Tables in Engineering Drawings	201
Revision Tables	201
Bill of Materials Tables	201
Proprietary and Confidential Statement.....	202
Status Notes	202
Drawing Practices.....	202
American Society of Mechanical Engineers Standards	203
The Need for Standards and Its Relationship with Interchangeability	204
A Common Engineering Language	205
Principles of Geometric Dimensioning and Tolerancing.....	211
Features.....	211
Feature Control.....	212
Datums.....	213
Requirements and Critical Design Outputs	213
Sources for Tolerance Specifications	214
Function Requirements	214
Assembly Requirements	215
Manufacturing Capability	216
Measurement Systems.....	216
Functional Gauges	217
File Storage and Change Control.....	218
Emerging Concepts and MIL-STD-31000A.....	218
Summary.....	219
Exercise.....	219
14. Design for X	221
Introduction.....	221
Design for Manufacturability	222
A Few Case Studies	222
Materials and Processes.....	226
Design for Assembly and Serviceability	227

A Few Case Studies	228
Printed Circuit Board Assemblies	233
Mistake-Proofing (Poka Yoke)	234
A Few Guidelines	235
Standardization	236
Principle of Self-Help and Component Design	236
Ergonomics for Assembly and Service	237
Design for Manufacturing/Assembly/Service in the Design Process	237
Design for Reliability	238
Product Use Profile	240
Failure Modes and Mechanisms	240
Life Expectancy, Design Life, Reliability, and Failure Rate	242
Product Reliability Modeling	243
Theoretical Modeling	243
Reliability Testing	244
Reliability Allocation	245
Other Aspects of Reliability	247
Reliability Planning and Execution in the Design Process	248
Summary	250
Exercise	251

Part V Preparation for Product Launch

15. Cost Requirements Cascade and Purchasing	255
Introduction	255
Cost, Price, and Revenues	255
Cost of Manufacture and Its Structure	257
Cost Estimates	261
Three Case Studies	262
Surgical Tool Handle Cost Savings	262
Machining versus Stamping	264
Ultrasonic Dental Scaler	267
Purchasing	270
Best Practices	270
Supplier Selection Process Map	272
Summary	273
Exercise	273
16. Detailed Design Failure Mode and Effects Analysis, Process Failure Mode and Effects Analysis, and Control Plans	275
Introduction	275
xFMEA and Design Process	277
Detailed Design Failure Mode and Effects Analysis Study	277
Parameter Diagram	280
Design Failure Mode and Effects Analysis Team and Prework	286
Performing Design Failure Mode and Effects Analysis	288

Process Failure Mode and Effect Analysis	292
Process Failure Mode and Effect Analysis Team and Prework	292
Performing Process Failure Mode and Effect Analysis	294
Control Plan	298
Example	298
Summary	300
Exercise	300

17. Design Verification, Product Validation, and Design Transfer	301
Introduction	301
Design Transfer in Product Development Model	302
A Successful Design Transfer Activity	304
Design Transfer Process	305
Design Verification and Product Validation	306
Traceability to Requirements	308
Verification or Validation Process	309
Summary	312

Part VI Sustaining a Marketed Product

18. Sustaining a Fielded Product	315
Introduction	315
Complaint Monitoring and Trending	315
Product Risk	316
Manufacturing Concerns	317
Supplier Issues	318
Component Obsolescence and Shortage	318
Service Concerns	319
Failures and Warranty Issues	319
Change Requests and Control	320
Product Recalls	321
Summary	322
Exercises	322
19. Product Retirement and End of Life	323
Introduction	323
End-of-Life Assessment and Planning	323
Impact Assessment	324
Business (Marketing, Branding, and Finance)	324
Logistics and Distribution Channels	324
Operations and Design Engineering	325
End-of-Life Planning	325
Obsoleting a Product	325
Business Aspects	326
Engineering and Technical Aspects	326
Design Engineering	326
Manufacturing	326

Supply Chain Management	327
Service	327
Summary	327

Part VII Engineering Skills Needed across All Disciplines

20. Configuration and Change Management	331
Introduction	331
Configuration Management	332
Configuration Management Process	334
Management and Planning	334
Configuration Identification	335
Configuration Control	336
Configuration Status Accounting	338
Configuration Verification and Audit	338
Configuration Management P-Diagram	338
Configuration Management and Configuration Management II	340
Change Management and Control	342
Change Control Process	343
Summary	345
21. Tolerance Specification and Analysis	347
Introduction	347
Tolerance Design in the V-Model	348
Tolerance Specifications	350
Process Capability	352
In a Nutshell	356
Tolerance Analysis	356
Worst-Case Analysis	357
Electrical Circuits	358
Nonlinear Worst-Case Analysis	359
Root Sum Squared Method	360
Monte Carlo Analysis	362
Unintended Consequences of Tolerance Specifications	363
Cost-Based Tolerance Analysis	365
Quality Loss Function	367
Summary	369
22. Data, Measurements, and Tests	371
Introduction	371
Noise Factors and Variations	372
Levels of Measurement and Basic Statistics	373
Categorical Data	374
Quantitative Data	376
Histogram	377
Measures of Central Tendency	378

Measures of Dispersion	379
Population versus Sample	380
Measurements	380
Dealing with Variation in Data	381
Confidence Level and Power of the Test	384
Confidence Intervals	386
Sample Size	386
Sample Size Calculations	387
Comparing Two Data Sets	387
Measurement System Analysis	388
Accuracy, Precision, and Bias	388
Gauge Repeatability and Reproducibility	389
A Few More Words on Variations	390
Elements of a Robust Test Plan	390
Summary	392
23. Failure Analysis and Product Improvements	395
Introduction	395
Investigation Process	396
Failure Observation and Determination	397
Example Problem Statement	397
Failure Isolation and Scope Determination	397
Example Problem Statement	397
Failure Verification	399
Failure Analysis and Root Cause Determination	399
Root Causes	399
Corrective Actions and Verification	400
Effectiveness and Control	400
Investigation Tools and Tips	400
Keys to a Successful Investigation	400
Data Collection and Retention	401
Corrective Action/Preventive Action Core Team	401
Summary	403
References	405
Glossary of Terms	413
Index	415
