Introduction	4	A transparent construction	33	The block diagram	52	The flat-on view	82
Equipment	6	Variations on the principles of construction	33	Block diagram for a study of the landscape	52	The flat-on view	84
The stroke and the line	8	Emphasising and optical corrections	34	Creating a body in three dimensions	54	Distinctive characteristics of the flat-on view	84
The stroke	8	Variations in isometric projections of the cube	34	Simple addition of two volumes	54	The view of the study sketch	84
Different kinds of stroke	8	The optical correction	34	Three kinds of figure	55	How to proceed	85
Graphics, values	9	Keeping the dimensions	34	Making a volume by subtraction	56	The problem of the depth	86
The line	9	Emphasising the façade	35	Subtracting volumes	56	Instructions for the square in perspective	86
Proportions	10	Suggesting perspective	35	Plaques and bars	57	Points of distance	87
How to measure proportions	10	Drawing small objects	36	Seeing in perspective	58	Measuring the depth: an exercise in synthesis	87
Transferring the proportion to the drawing	11	Practise with familiar objects	36	The eye view	60	Constructing in space freehand	88
How to find the correct proportions	11	Drawing furniture	36	The importance of the point of view	60	Doing without the distance point	89
Division	12	Division of a circle into three equal angles	37	Changing the angle of sight	61	Constructing equal depths on a wall	90
Dividing by 2, Dividing by 3,		Exercises in isometric projection	38	Perspective in nature	62	The distance of the draughtsman	91
Dividing by 4	12	A common error to avoid	38	Our perception of the landscape	62	View to the front, view to the back	92
Dividing by 5, Dividing by 6,		Working on the appearance	38	Atmospheric perspective	63	View to the front	92
Dividing by 7, Dividing by 8,		Exercise 1: The 'Magicube'	39	Analysis of perspective	64	View to the back	93
Dividing by 9, Dividing by 10,		Exercise 2: Placing the depth of a hole	40	Analysing the landscape	66		
Dividing by 11	13	Exercise 3: Drawing a straight flight of steps	41	Simplify	66		
Dividing with the Theorem of Thales	13	Exercise 4: Drawing a staircase with a turn	41	Locate the geometric features	67		
Looking face on	14	Shadows	42	The vanishing point	68	The oblique view or at an angle	96
The basic figures	16	The basic principles	42	What is a vanishing point?	68	The perspective with two vanishing points	96
The square	16	Own shadow and cast shadow	42	Placing a vanishing point	69	...Is not fundamentally different from the frontal view	96
The circle	17	Parallel lighting, conical lighting	42	The vanishing point follows you	70	Multiple directions and vanishing points	97
Some construction tricks	18	Constructing shadows	43	The vanishing point of horizontal lines is at eye level	71	How to manage without a vanishing point, method 1	98
Ellipses and curves	19	Exercise	43	Subjective nature of the vanishing point	71	How to manage without a vanishing point, method 2	98
Drawing curves	19	A system for making shadows	44	The 'true' vanishing point and the one that we see	71	Finding the horizon	99
Borders	20	The disposition of shadows	44	The horizon	72	Division of depth	100
Drawing letters	22	The shadow of a wall	44	Concerning the horizon	72	Measuring the depth	101
Drawing individual letters	22	The shadow on a wall	45	The height of the horizon	73	View from above... and below	102
Drawing letters by dividing up a panel	23	In the case of steps	45	The horizon in the drawing	73	View downwards	102
Drawing objects seen face on	24	Working with tone values	46	The concept of the picture plane	74	The view upwards	103
Drawing furniture	25	Some principles to remember	46	The picture plane	74	Memorise a basic sketch	104
Drawing windows and façades	26	The shadow reveals the object	47	The ground as a point of reference	74	Observation	104
Drawing windows	26	Prisms and extrusions	48	The scale of the picture plane	75	How to proceed	105
Drawing façades	27	Mastering elementary forms	48	The vanishing point of the picture plane	76	Staircases	106
Geometric drawing	28	Cylinders and cones	48	The four vanishing points	76	Sorting out the starting lines	106
Why geometric drawing?	28	The base of the cylinder	49	The horizon on the picture plane	77	Getting the slope right	107
Different cross-sections	29	The exterior shadow of the cylinder	49	Putting into practice in a sketch	78	Roads, streets and pavements	108
		The interior shadow of the cylinder	49	Choosing and framing the subject	78	A street with a steep slope	108
		Spheres and revolutions	50	Drawing by building outwards from a starting point	80	Roofs and cornices	110
		The construction of the sphere	50			How to draw the cornices	111
		The torus	51				
		The block diagram and the landscape seen in relief	52
