## PART A

---

### WHAT WENT WRONG?

Chapter 1. Preparation for Maintenance	3
1.1 Isolation	3
1.2 Identification	12
1.3 Removal of Hazards	17
1.4 Procedures Not Followed	24
1.5 Quality of Maintenance	31
1.6 A Personal Note	42
Chapter 2. Modifications	45
2.1 Startup Modifications	45
2.2 Minor Modifications	46
2.3 Modifications Made during Maintenance	51
2.4 Temporary Modifications	53
2.5 Sanctioned Modifications	54
2.6 Process Modifications	56
2.7 New Tools	59
2.8 Organizational Changes	60
2.9 Gradual Changes	61
2.10 Modification Chains	62
2.11 Modifications Made to Improve the Environment	64
2.12 Control of Modifications	68
Chapter 3. Accidents Said to Be Due to Human Error	71
3.1 Introduction	71
3.2 Accidents That Could Be Prevented by Changing the Plant Design or Method of Working	73
3.3 Accidents That Could Be Prevented by Better Training	81

Chapter 4. Labeling	89
4.1 Labeling of Equipment	89
4.2 Labeling of Instruments	92
4.3 Labeling of Chemicals	93
4.4 Labels Not Understood	96
Chapter 5. Storage Tanks	97
5.1 Overfilling	97
5.2 Overpressuring	99
5.3 Sucking In	102
5.4 Explosions	105
5.5 Floating-Roof Tanks	112
5.6 Miscellaneous Incidents	116
5.7 Fiberglass-Reinforced (FRP) Tanks	119
Chapter 6. Stacks	123
6.1 Stack Explosions	123
6.2 Blocked Stacks	126
6.3 Heat Radiation	128
Chapter 7. Leaks	131
7.1 Some Common Sources of Leaks	132
7.2 Control of Leaks	139
7.3 Leaks onto Water, Wet Ground, or Insulation	144
7.4 Detection of Leaks	145
7.5 Fugitive Emissions	147
Chapter 8. Liquefied Flammable Gases	149
8.1 Major Leaks	150
8.2 Minor Leaks	157
8.3 Other Leaks	158
8.4 Safety in the Design of Plants Handling Liquefied Light Hydrocarbons	160
Chapter 9. Pipe and Vessel Failures	163
9.1 Pipe Failures	163
9.2 Pressure Vessel Failures	177
Chapter 10. Other Equipment	185
10.1 Centrifuges	185
10.2 Pumps	186
10.3 Air Coolers	188
10.4 Relief Valves	188
10.5 Heat Exchangers	196
10.6 Cooling Towers	199
10.7 Furnaces	200

Chapter 11. Entry to Vessels	207
11.1 Vessels Not Freed from Hazardous Material	207
11.2 Hazardous Materials Introduced	209
11.3 Vessels Not Isolated from Sources of Danger	211
11.4 Unauthorized Entry	214
11.5 Entry into Vessels with Irrespirable Atmospheres	215
11.6 Rescue	216
11.7 Analysis of Vessel Atmosphere	217
11.8 What Is a Confined Space?	218
11.9 Every Possible Error	218
Chapter 12. Hazards of Common Materials	221
12.1 Compressed Air	221
12.2 Water	223
12.3 Nitrogen	225
12.4 Heavy Oils (Including Heat Transfer Oils)	231
Chapter 13. Tank Trucks and Cars	237
13.1 Overfilling	237
13.2 Burst Hoses	238
13.3 Fires and Explosions	240
13.4 Liquefied Flammable Gases	240
13.5 Compressed Air	241
13.6 Tipping Up	241
13.7 Emptying into or Filling from the Wrong Place	242
13.8 Contact with Live Power Lines	244
Chapter 14. Testing of Trips and Other Protective Systems	247
14.1 Testing Should Be Thorough	247
14.2 All Protective Equipment Should Be Tested	250
14.3 Testing Can Be Overdone	253
14.4 Protective Systems Should Not Reset Themselves	253
14.5 Trips Should Not Be Disarmed without Authorization	255
14.6 Instruments Should Measure Directly What We Need to Know	257
14.7 Trips Are for Emergencies, Not for Routine Use	258
14.8 Tests May Find Faults	259
14.9 Some Miscellaneous Incidents	259
14.10 Some Accidents at Sea	260
Chapter 15. Static Electricity	263
15.1 Static Electricity from Flowing Liquids	264
15.2 Static Electricity from Gas and Water Jets	265
15.3 Static Electricity from Powders and Plastics	266
15.4 Static Electricity from Clothing	268

Chapter 16. Materials of Construction	271
16.1 Wrong Material Used	271
16.2 Hydrogen Produced by Corrosion	275
16.3 Other Effects of Corrosion	276
16.4 Loss of Protective Coatings	276
16.5 Some Other Incidents Caused by Corrosion	277
16.6 Fires	278
16.7 Choosing Materials	278
Chapter 17. Operating Methods	281
17.1 Trapped Pressure	281
17.2 Clearing Choked Lines	283
17.3 Faulty Valve Positioning	284
17.4 Responsibilities Not Defined	286
17.5 Communication Failures	287
17.6 Work at Open Manholes	289
17.7 One Line, Two Duties	289
17.8 Inadvertent Isolation	290
17.9 Incompatible Storage	290
17.10 Maintenance: Is It Really Necessary?	291
17.11 An Interlock Failure	292
17.12 Emulsion Breaking	293
17.13 Chimney Effects	294
Chapter 18. Reverse Flow, Other Unforeseen Deviations, and Hazop	297
18.1 Reverse Flow from a Product Receiver or Blowdown Line Back into the Plant	297
18.2 Reverse Flow into Service Mains	299
18.3 Reverse Flow through Pumps	300
18.4 Reverse Flow from Reactors	301
18.5 Reverse Flow from Drains	303
18.6 Other Deviations	303
18.7 A Method for Foreseeing Deviations	304
18.8 Some Pitfalls in Hazop	306
18.9 Hazop of Batch Plants	307
18.10 Hazop of Tank Trucks	308
18.11 Hazop: Conclusions	309
Chapter 19. I Didn't Know That ...	313
19.1 Ammonia Can Explode	313
19.2 Hydraulic Pressure Tests Can Be Hazardous	315
19.3 Diesel Engines Can Ignite Leaks	316
19.4 Carbon Dioxide Can Ignite a Flammable Mixture	317
19.5 Mists Can Explode	318
19.6 The Source of the Problem Lay Elsewhere	319

- Chapter 20. Problems with Computer Control 323
- 20.1 Hardware and Software Faults 323
  - 20.2 Treating the Computer as a Black Box 324
  - 20.3 Misjudging the Way Operators Will Respond 328
  - 20.4 Other Problems 330
  - 20.5 Unauthorized Interference 331
  - 20.6 New Applications 333
  - 20.7 Conclusions 334
- Chapter 21. Inherently Safer Design 337
- 21.1 Bhopal 338
  - 21.2 Other Examples of Inherently Safer Design 342
  - 21.3 User-Friendly Design 346
- Chapter 22. Reactions—Planned and Unplanned 349
- 22.1 Lack of Knowledge 349
  - 22.2 Poor Mixing 351
  - 22.3 Contamination 353
  - 22.4 Reactions with Auxiliary Materials 355
  - 22.5 Poor Training or Procedures 355
  - 22.6 Use-By Dates 356

## PART B

---

### STILL GOING WRONG

- Chapter 23. Maintenance 361
- 23.1 Inadequate Preparation on a Distant Plant 361
  - 23.2 Precautions Relaxed Too Soon 362
  - 23.3 Failure to Isolate Results in a Fire 364
  - 23.4 Unintentional Isolation 365
  - 23.5 Bad Practice and Poor Detailed Design 366
  - 23.6 Dismantling 367
  - 23.7 Commissioning 370
  - 23.8 Other Hidden Hazards 370
  - 23.9 Changes in Procedure 371
  - 23.10 Dead-Ends 372
- Chapter 24. Entry into Confined Spaces 375
- 24.1 Incomplete Isolation 375
  - 24.2 Hazardous Materials Introduced 376
  - 24.3 Weaknesses in Protective Equipment 377
  - 24.4 Poor Analysis of Atmosphere 378

24.5	When Does a Space Become Confined?	378
24.6	My First Entry and a Gasholder Explosion	382
24.7	Failure of a Complex Procedure	384
24.8	Epidemics of Unsafe Entries	385
Chapter 25. Changes to Processes and Plants 391		
25.1	Changes to Processes	392
25.2	Changes to Plant Equipment	395
25.3	Gradual Changes	403
25.4	Changes Made Because the Reasons for Equipment or Procedures Has Been Forgotten	405
Chapter 26. Changes in Organization 407		
26.1	An Incident at an Ethylene Plant	408
26.2	The Longford Explosion	411
26.3	The Texas City Explosion	414
26.4	Outsourcing	417
26.5	Multiskilling and Downsizing	417
26.6	How to Lose Your Reputation	418
26.7	Administrative Convenience versus Good Science	419
26.8	The Control of Managerial Modifications	419
26.9	Some Points a Guide Sheet Should Cover	420
26.10	Afterthoughts	421
Chapter 27. Changing Procedures Instead of Designs 423		
27.1	Misleading Valve Layouts	425
27.2	Simple Redesign Overlooked	428
27.3	Unimaginative Thinking	429
27.4	Just Telling People to Follow the Rules	431
27.5	Don't Assemble It Incorrectly	431
27.6	Tighten Correctly or Remove the Need	433
27.7	Should Improvements to Procedures Ever Be the First Choice?	433
Chapter 28. Materials of Construction (Including Insulation) 435		
28.1	Rust	435
28.2	Insulation	439
28.3	Brittle Failure	441
28.4	Wrong Materials of Construction	442
28.5	Corrosion Sends a Column into Orbit	445
28.6	Unexpected Corrosion	446
28.7	Another Failure to Inspect Pipework	446
28.8	How Not to Write an Accident Report	447
Chapter 29. Operating Methods 449		
29.1	The Alarm Must Be False	449

- 29.2 A Familiar Accident—But Not as Simple as It Seemed 450
  - 29.3 More Reluctance to Believe the Alarm 453
  - 29.4 The Limitations of Instructions 454
  - 29.5 The Limitations of Instructions Again 454
  - 29.6 Empty Plant That Is Out of Use 455
- 29.7 A Minor Job Forgotten—Until There Was a Leak 455
- 29.8 Design Error + Construction Error + Operating Error = Spillage 456

### Chapter 30. Explosions 459

- 30.1 An Explosion in a Gas-Oil Tank 459
- 30.2 Another Sort of Explosion 461
- 30.3 One + One = More Than Two 462
- 30.4 “Near Enough Is Good Enough” 463
- 30.5 Another Explosion Ignited by a Carbon Bed 464
- 30.6 An Explosion in an Alternative to a Carbon Bed 465
  - 30.7 Only a Minor Change 465
  - 30.8 An Explosion in a Pipe 466
  - 30.9 A Dust Explosion in a Duct 468
  - 30.10 Obvious Precautions Neglected 469
  - 30.11 A Drum Explosion 470
- 30.12 Foam-Over—The Cinderella of the Oil and Chemical Industries 470
- 30.13 Explosions of Cold Gasoline in the Open Air 472
  - 30.14 The Inevitability of Ignition 474

### Chapter 31. Poor Communication 479

- 31.1 What Is Meant by *Similar*? 479
- 31.2 More *Similar* Errors 481
- 31.3 Wrong Material Delivered 482
  - 31.4 Packaged Deals 482
  - 31.5 “Draftsmen’s Delusions” 483
- 31.6 Same Plant and Product, but No Communication 485
- 31.7 A Failure at the Design/Construction Interface 486
- 31.8 Failure of Communication between Marketing and Technology 486
  - 31.9 Too Much Communication 487
  - 31.10 No One Told the Designers 487
  - 31.11 Conclusions 488

### Chapter 32. I Did Not Know ... 491

- 32.1 ... That Metals Can Burn 491
- 32.2 ... That Aluminum Is Dangerous When Wet 492
- 32.3 ... That Rubber and Plastics Are Permeable 493
- 32.4 ... That Some Plastics Can Absorb Process Materials and Swell 493
  - 32.5 ... What Lay Underneath 494
  - 32.6 ... The Method of Construction 495
  - 32.7 ... Much about Static Electricity 496
- 32.8 ... That a Little Contamination Can Have a Big Effect 499

- 32.9 ... That We Cannot Get a Tight Seal between Thin Bolted Sheets 500
- 32.10 ... That Unforeseen Sources of Ignition Are Often Present 501
- 32.11 ... That Keeping the Letter of the Law Is Not Enough 502
- 32.12 ... The Power of Compressed Air 503

### Chapter 33. Control 507

- 33.1 Instruments That Cannot Do What We Want Them to Do 507
- 33.2 Too Little Instrumentation 515
- 33.3 Diagrams Were Not Up to Date 516
- 33.4 An Automatic Restart Fails to Restart 517
- 33.5 Procedures: An Essential Feature of Control Systems 518

### Chapter 34. Leaks 521

- 34.1 Leaks from Tanks 522
- 34.2 Leaks from Lined Pipes 523
- 34.3 A Leak through Closed Valves 524
- 34.4 A Leak Caused by Surge Pressure 526
- 34.5 Leaks from Screwed Fittings 527
- 34.6 Other Weak Spots in Pipework 528

### Chapter 35. Reactions—Planned and Unplanned 531

- 35.1 Delayed Mixing 531
- 35.2 Waiting Until after the Fourth Accident 533
- 35.3 Lower Temperature May Not Mean Less Risk 534
- 35.4 Forgetting to Add a Reactant 535
- 35.5 Inadequate Tests 536
- 35.6 A Heating Medium Was Too Hot 537
- 35.7 An Unstable Substance Left Standing for Too Long 538

### Chapter 36. Both Design and Operations Could Have Been Better 539

- 36.1 Water in Relief Valve Tailpipes 539
- 36.2 A Journey in a Time Machine 540
- 36.3 Chokes in Flarestacks 542
- 36.4 Other Explosions in Flarestacks 544
- 36.5 Design Poor, Protection Neglected 545
- 36.6 Several Poor Systems Do Not Make a Good System 546
- 36.7 "Failures in Management, Equipment, and Control Systems" 549
- 36.8 Changes to Design and Operations 552
- 36.9 The Irrelevance of Blame 553

### Chapter 37. Accidents in Other Industries 555

- 37.1 An Explosion in a Coal Mine 555
- 37.2 Marine Accidents 556
- 37.3 Human Error 559

37.4 Tests Should Be Like Real Life	560
37.5 Load and Strength Too Close	560
37.6 The Nineteenth Century	562
<b>Chapter 38. Accident Investigation—Missed Opportunities</b>	<b>565</b>
38.1 Accident Investigations Often Find Only a Single Cause	565
38.2 Accident Investigations Are Often Superficial	566
38.3 Accident Investigations List Human Error as a Cause	567
38.4 Accident Reports Look for People to Blame	568
38.5 Accident Reports List Causes That Are Difficult or Impossible to Remove	568
38.6 We Change Procedures Rather Than Designs	569
38.7 We May Go Too Far	569
38.8 We Do Not Let Others Learn from Our Experience	570
38.9 We Read or Receive Only Overviews	570
38.10 We Forget the Lessons Learned and Allow the Accident to Happen Again	571
<b>Chapter 39. An Accident That May Have Affected the Future of Process Safety</b>	<b>577</b>
39.1 Why Did ICI, More So Than Other Companies, Make These Changes?	579
39.2 What Would Have Happened If ICI Had Not Existed?	579
39.3 Why Did ICI Come to an End?	580
39.4 What Will We Miss in the Years to Come?	581
<b>Appendix 1. Relative Frequencies of Incidents</b>	<b>583</b>
<b>Appendix 2. Why Should We Publish Accident Reports?</b>	<b>587</b>
<b>Appendix 3. Some Tips for Accident Investigators</b>	<b>589</b>
<b>Appendix 4. Recommended Reading</b>	<b>591</b>
<b>Appendix 5. Afterthoughts</b>	<b>593</b>
<b>Index</b>	<b>595</b>
