

About the reviewer

Sungkuk Park is a game engineer based in Berlin. He has participated in multiple game jams around the world and has created indie games to polish his skills. He is currently interested in the area of technical art, mainly CG, animation, gameplay, and VFX. In his spare time, he spends most of his time learning new skills, including drawing, animation, and VFX, that might come in handy when he pursues his next goal: being a game director for the next gaming generation!

Packt is searching for authors like you

If you're interested in becoming an author for Packt, please visit authors.packtpub.com and apply today. We have worked with thousands of developers and tech professionals, just like you, to help them share their insight with the global tech community. You can make a general application, apply for a specific hot topic that we are recruiting an author for, or submit your own idea.

Table of Contents

Preface

1

Designing a Game from Scratch

Game concept	14	The difficulty balance	22
Input controls	15	Difficulty balance questions	23
Winning and losing	16	Implementation plan	24
Game characters	17	Documentation	25
Hero	17	Game Design Document (GDD)	25
Enemies	18	GDD formats	26
Gameplay	18	GDD creation tools	26
Game-world layout	19	Elevator pitch	28
Starting condition	20	A high concept	29
Ending condition	20	Tips for creating GDDs	30
Point system	21	Summary	33
HUD	21		

2

Setting Up Unity

Why use a game engine such as Unity?	36	Installing Unity	38
Past and present industry insight	36	Unity versions	39
Game engines	37	Installing Unity with Unity Hub	39
Positives of Unity	37	Creating projects	45
		Creating a project	45
		Project structure	48
		Summary	50

3

Working with Scenes and GameObjects

Manipulating scenes	52	Possible uses	69
The purpose of a scene	52	Prefabs	70
The Scene View	53	Creating Prefabs	71
Our first GameObject	54	Prefab-instance relationship	72
Navigating the Scene View	55	Prefab variants	75
Manipulating GameObjects	56	Saving scenes and projects	77
GameObject and components	60	Saving our changes	77
Components	61	Project structure	78
Manipulating components	62	Summary	80
Object hierarchies	68		
Parenting of objects	68		

4

Grayboxing with Terrain and ProBuilder

Creating a Landscape with Terrain	82	Installing ProBuilder	93
Discussing Height Maps	82	Creating a Shape	95
Creating and configuring Height Maps	84	Manipulating the mesh	96
Authoring Height Maps	87	Adding details	102
Adding Height Map details	90	Summary	106
Creating Shapes with ProBuilder	93		

5

Importing and Integrating Assets

Importing assets	107	Integrating assets	116
Importing assets from the internet	108	Integrating terrain textures	116
Importing assets from the Asset Store	110	Integrating meshes	119
		Integrating textures	121

Configuring assets	123	Assembling the scene	128
Configuring meshes	124	Summary	131
Configuring textures	126		

6

Materials and Effects with URP and Shader Graph

Introducing Shaders	134	Creating our first Shader Graph asset	144
Shader Pipeline	134	Using Textures	148
Render Pipelines and URP	137	Combining Textures	157
URP Built-in Shaders	139	Applying transparency	161
Creating Shaders with Shader Graph	143	Summary	163

7

Visual Effects with Particle Systems and VFX Graph

Introduction to particle systems	166	Creating complex simulations with VFX Graph	178
Creating a basic particle system	167	Installing VFX Graph	179
Using advanced modules	172	Creating and analyzing a VFX Graph	181
Creating fluid simulations	173	Creating a rain effect	185
Creating a waterfall effect	174	Summary	189
Creating a bonfire effect	176		

8

Lighting Using the Universal Render Pipeline

Applying lighting	192	Optimizing lighting	213
Discussing lighting methods	192	Understanding static lighting	213
Configuring ambient lighting with skyboxes	197	Baking lightmaps	214
Configuring lighting in URP	202	Applying static lighting to static objects	221
Applying shadows	205	Summary	224
Understanding shadow calculations	206		
Configuring performant shadows	210		

9

Fullscreen Effects with postprocessing

Using postprocessing	226	Advanced effects	232
Setting up a profile	226	Summary	242
Using basic effects	229		
Using advanced effects	232		

10

Sound and Music Integration

Importing audio	243	Using 2D and 3D AudioSources	250
Audio types	244	Using an Audio Mixer	254
Configuring import settings	245	Summary	259
Integrating and mixing audio	250		

11

User Interface Design

Understanding Canvas and RectTransform	263	Creating UI controls	275
Creating a UI with Canvas	263	Creating a responsive UI	282
Positioning elements with RectTransform	265	Adapting objects' positions	283
		Adapting objects' sizes	286
Canvas objects types	268	Summary	290
Integrating assets for the UI	268		

12

Creating Animations with Animator, Cinemachine, and Timeline

Using skeletal animations with Animator	292	Integration using Animation Controllers	299
Understanding skinning	292		
Importing skeletal animations	295		

Creating dynamic cameras with Cinemachine	305	Timeline	313
Creating dolly tracks	309	Creating animation clips	313
		Sequencing our intro cutscene	317

Creating cutscenes with		Summary	322
-------------------------	--	---------	-----

13

Introduction to Unity Scripting with C#

Creating C# scripts	324	Events and instructions	333
Initial setup	324	Using fields in instructions	337
Creating a MonoBehaviour-based class	327	Common beginner errors	338
Adding fields	330	Summary	341
Using events and instructions	333		

14

Implementing Movement and Spawning

Implementing movement	344	Spawning objects	355
Moving objects through Transform	344	Timing actions	363
Using Input	348	Destroying objects	367
Understanding Delta Time	353	Summary	368
Implementing spawning	355		

15

Physics Collisions and Health System

Configuring Physics	370	Moving with Physics	386
Setting shapes	370	Applying forces	386
Physics Object types	373	Tweaking Physics	388
Filtering collisions	377	Summary	391
Detecting collisions	380		
Detecting Trigger events	381		
Modifying the other Object	383		

16

Win and Lose Conditions

Creating Object Managers	394	Creating Game Modes	402
Implementing the Singleton design pattern	394	Improving our code with events	406
Creating Managers with Singleton	398	Summary	413

17

Scripting the UI, Sounds, and Graphics

Scripting the UI	416	Scripting audio feedback	432
Showing information in the UI	416	Scripting animations	434
Programming the Pause menu	423	Summary	437
Scripting feedback	428		
Scripting visual feedback	428		

18

Implementing Game AI for Building Enemies

Gathering information with sensors	440	Creating transitions	452
Creating Three-Filters sensors	440	Executing FSM actions	456
Debugging with Gizmos	446	Calculating our scene Pathfinding	457
		Using Pathfinding	459
Making decisions with FSMs	450	Adding final details	462
Creating the FSM	450	Summary	467

19

Scene Performance Optimization

Optimizing graphics	470	Optimizing processing	481
Introduction to graphic engines	470	Detecting CPU- and GPU-bound	481
Using Frame Debugger	472	Using the CPU Usage profiler	484
Using batching	474	General CPU optimization techniques	488
Other optimizations	477		

Optimizing memory	49
Memory allocation and the garbage collector	491

20

Building the Project

Building a project	501
Debugging the build	506
Debugging code	507

21

Finishing Touches

Iterating your game	513	Rel. release	520
Testing and feedback	514	Post-release	521
Interpreting feedback	516	Summary	522
Releasing your game	518		
Pre-release	518		

22

Augmented Reality in Unity

Using AR Foundation	524	Creating a simple AR game	545
Creating an AR Foundation project	524	Spawning the Player and Enemies	546
Using tracking features	528	Coding the Player and Enemy behavior	549
Building for mobile devices	536	Summary	554
Building for Android	536		
Building for iOS	542
