

	PAGE
1 Introduction	6
2 AC drive systems with one or more fixed speeds	8
2.1 Mode of operation of a AC squirrel-cage motor	8
2.2 Rated data of an AC squirrel-cage motor	9
2.3 Efficiency η and power factor $\cos \varphi$	9
2.4 Thermal classification in accordance with EN 60034	10
2.5 Tolerances	10
2.6 Power reduction	11
2.7 Operating modes according to EN 60034	11
2.8 Winding protection	12
2.9 Enclosure of AC motors and AC geared motors	13
2.10 Dimensioning from load torque, inertia and starting frequency	13
2.11 Soft start, switch-over of AC squirrel-cage motors	14
2.12 Brake motors	15
2.12.1 Design and mode of operation	16
2.12.2 Brake reaction times	16
2.12.3 Braking torques	16
2.12.4 Load limit	16
2.12.5 Braking distance and stopping accuracy	17
2.12.6 Mechanical brake release	17
2.12.7 Brake heating	17
2.12.8 Brake contactors	17
2.12.9 Counter-current braking and direct current braking	17
3 AC drive systems with frequency inverters	18
3.1 Frequency inverters with DC link circuit	18
3.2 Operating characteristics / Frequency range	19
3.3 Motor dimensioning / Cooling	21
3.4 Project planning with SEW MOVITRAC [®] frequency inverters	21
3.5 Mains connection	23
3.6 Options	23
4 Servo drives	24
4.1 Definition of servo technology	24
4.2 Permanent-field synchronous motor	24
4.2.1 Design and mode of operation	26
4.2.2 Motor control	27
4.2.3 Speed-torque characteristic	28
4.2.4 Resolver	29
4.3 SEW MOVIDYN [®] servo controllers	29
4.3.1 MOVIDYN [®] power supply modules	30
4.3.2 MOVIDYN [®] axis modules	31
4.3.3 Options	31
4.3.4 MOVIDYN [®] compact servo controller	32
4.4 Project planning with SEW MOVIDYN [®] servo controller	32
5 DC drive systems	33
5.1 Function of the DC motor	33
5.2 Shunt-wound and series-wound motors	33
5.3 Speed control	34
5.4 Power, ripple, form factor	34

5.5	Connection and overload capacity of DC motors	37
5.6	Armature voltage regulation, speed control	37
5.7	Cooling	37
5.8	Starting frequency	37
5.8.1	Heating up of the winding	37
5.8.2	Commutator loading	38
5.9	Enclosures, thermal classification, tolerances	38
6	AC drive systems with mechanical variable speed gear units	39
6.1	Types of variable speed gear units	39
6.2	Adjustability, adjustment time	39
6.3	Dimensioning of the variable speed geared motors	39
6.3.1	Dimensioning for constant torque	40
6.3.2	Dimensioning for constant power	41
6.3.3	Dimensioning for constant power and constant torque	42
6.4	Service factors	42
6.5	Overload protection	43
6.6	Information on project planning	43
7	Gear units	44
7.1	Geared motors	45
7.2	Output speed, output torque	45
7.3	Service factor (helical, helical-bevel, helical-worm, and Spiroplan® gear units)	45
7.4	Dimensioning of low-backlash planetary geared motors PSF series	47
7.5	Overhung loads, axial loads	47
7.6	Gear unit efficiency	48
7.7	Wearing parts	48
7.8	Speed	49
7.9	Mounting position, oil capacity	49
8	Formulae employed for the calculation of drive systems	50
8.1	Force	50
8.2	Torque	50
8.3	Power	50
8.4	Moments of inertia	51
8.5	Kinematics	52
8.6	Special formulae	53
9	Calculation example travel drive	54
9.1	Input data	54
9.2	Motor calculation	54
9.2.1	Resistance to motion	54
9.2.2	Static power	55
9.2.3	Dynamic power	56
9.2.4	Calculation check	57
9.3	Gear unit selection	61
9.4	Travel drive with two speeds	62
9.5	Travel drive with frequency inverter	68
9.5.1	Input data	68
9.5.2	Optimizing the travel cycle	68
9.5.3	Calculation of power	69
9.5.4	Setting range	71
9.5.5	The 87 Hz-characteristic	72

9.5.6	Speed control	72
9.5.7	Synchronous operation	73
10	Calculation example drive units for vertical motion	75
10.1	Input data	75
10.2	Motor calculation	75
10.2.1	Upwards motion	76
10.2.2	Downwards motion	78
10.3	Hoisting application with frequency inverter	80
10.3.1	Input data	80
10.3.2	Calculation of power	80
10.3.3	Braking resistors	82
11	Calculation example chain conveyor with frequency inverter	84
11.1	Input data	84
11.2	Motor calculation	84
11.3	Gear unit selection	86
12	Calculation example roller conveyor with frequency inverter	87
12.1	Input data	87
12.2	Motor calculation	87
13	Calculation example rotary table drive	91
13.1	Input data	91
13.2	Motor calculation	91
13.3	Selection of the gear unit	94
14	Calculation example belt conveyor	95
14.1	General	95
14.2	Input data	96
14.3	Motor calculation	96
14.4	Selection of the gear unit and the variable speed gear unit	99
15	Calculation example crank-rocker linkage drive	100
15.1	General	100
15.2	Input data	101
15.3	Motor calculation	101
16	Gantry crane with servo drives	104
16.1	Input data	104
16.2	Optimizing the travel cycles	105
16.3	Power calculation	107
16.3.1	Travel axis	107
16.3.2	Hoist axis up motion	107
16.3.3	Hoist axis down motion	108
16.4	Selection of the gear unit	109
16.5	Motor selection	111
16.6	Selection of the drive electronics	115
16.6.1	Selection of the axis module	115
16.6.2	Selection of the power supply module	116
16.6.3	Selection of the braking resistor	116
16.6.4	Selection of the heat sink	118
17	Appendix with tables	119
18	Explanation of symbols	122
